Art Unit: 1765

The reissue oath/declaration filed with this application is defective (see 37 CFR 1.175 and MPEP § 1414) because of the following:

It does not identify the foreign application for patent or inventor's certificate on which priority is claimed pursuant to 37 CFR 1.55, and any foreign application having a filing date before that of the application on which priority is claimed, by specifying the application number, country, day, month and year of its filing.

Claims 1 to 66 are rejected as being based upon a defective reissue oath under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

The nature of the defect(s) in the oath is set forth in the discussion above in this Office action.

Response to the Protest

The protest of May 8, 2002 has been fully considered by the examiner of record. The protest argues that the claims of the instant application should be rejected under 35 USC 102 and 103 over the Kremer EP reference. However, the examiner's interpretation does not merit any rejections over the Kremer reference. The reference does teach varying the amount of doping, but this is done when changing the size of the grown crystal. There is no teaching to add more than the required amount of carbon dopant at the start of the process. Further, the reference gives neither reasoning nor motivation to add the excessive amount as instantly claimed. The reference teaches adding just enough dopant and only changing the amount when changing crystal size.

Examiner's Remarks

Applicant is required to provide an explanation of the support found in the disclosure of the patent for the addition of claims 22-66 in accordance with MPEP 1453 and 37 CFR 1.173 (c). Applicants may also submit an application data sheet claiming foreign priority to cure the defective oath.
